SUMMARY

Full Stack Software Engineer with 4+ years building scalable, distributed, multi-tenant SaaS systems. Specialized in microservices, event-driven architecture, and cloud infrastructure, with a track record of shipping production systems for 15+ enterprise clients. Strengths in clean architecture, performance optimization, and end-to-end ownership.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python

Frameworks: NestJS, Nodejs, React, Angular, Express.js, Django, FastAPI

Architecture: Microservices, Event-Driven Systems, REST APIs, Multi-Tenant Isolation, RBAC, SSO

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis

Messaging/Streaming: RabbitMQ, Real-Time IoT Telemetry, Async Pipelines

Cloud & DevOps: AWS, Docker, Jenkins, CI/CD, Grafana, PM2

Practices: System Design, Agile/Scrum, Unit & Integration Testing, Performance Optimization

EXPERIENCE

Software Development Engineer

Apr 2022 – Present

Akrivia Automation Pvt. Ltd.

Hyderabad, India

- Architected a multi-tenant industrial automation SaaS platform from scratch, scaling it to serve **15+ enterprise clients** with **100% data isolation**, by designing NestJS/FastAPI microservices with RabbitMQ-based event-driven communication.
- Improved API request-handling performance by **40%** by building a centralized NestJS API Gateway with Redis caching, RBAC enforcement, and middleware for rate limiting and circuit breaking.
- Reduced client onboarding time by **80%** by developing a multi-tenant onboarding system with RabbitMQ messaging, AES-encrypted communication, and automated tenant provisioning workflows.
- Cut anomaly-detection and notification latency significantly by implementing asynchronous processing pipelines with RabbitMQ and Redis for real-time IoT telemetry ingestion.
- Increased data reliability and query performance by designing a dual-database (MongoDB + SQL Server) strategy optimized for time-series and relational workloads.

Freelance Full Stack Developer

Jun 2026 – Present

Independent

Remote

- Delivered a production-grade Django full-stack application for a UAE-based client as sole developer, owning architecture through go-live, using Django REST Framework with JWT auth and modular app structure.
- Reduced deployment overhead and improved uptime by containerizing the stack with Docker Compose and deploying to a DigitalOcean VPS with Nginx reverse proxy and Cloudflare SSL/DNS.
- Enabled full operational control by building a Super Admin Portal with granular RBAC, audit logging, and a real-time metrics dashboard for user activity and system health.

KEY PROJECTS

Machine Health Monitoring SaaS

NestJS, React, MongoDB, SQL Server, Redis, RabbitMQ

- Built a secure multi-tenant monitoring platform for **15+ manufacturing clients**, with tenant-level isolation, enterprise SSO, and predictive real-time alert pipelines.

API Gateway

NestJS, Redis, RabbitMQ, JWT, RBAC

- Centralized authentication, license validation, and routing across all microservices, improving request handling performance by **40%**.

Super Admin Onboarding System

Angular, NestJS, Redis, RabbitMQ, AES

- Designed a hierarchical permission model (super admin / tenant admin / end-user) with automated provisioning, reducing onboarding time by **80%**.

EDUCATION

B.Tech, Computer Science and Engineering

Raghu Engineering College

Apr 2023

Vizag, India
